

Built for Real-World Reliability, Seamless Integration, and Smarter Field Operations

Network Highlights:

- Built specific for secure industrial remote asset applications
- Encrypted Access and Control to remote sites through VPN options
- Access to the FirstNet Network built by AT&T
- Meets or Exceeds Industry Security Standards such as CISA and NSA
- No stranded assets with global cellular network and satellite options
- Reaction time improvements through real-time network data performance and pending issues
- Cross-Carrier Communications enables data exchange between devices independent of network carrier via cellular or satellite.

Security:

- Multi-tiered security providing overlapping layers of data and operational protection
- Diligent in Monitoring and Updating Security Technologies
- Strict traffic control and filtering (data-only)
- Secure client connectivity via VPN
- Data centers meet standards such as PCI, HIPAA, FINRA and Sarbanes- Oxley
- Leveraging hardware configuration best practices to optimize security provisioning

Secure Private Network Benefits:

Security and related Compliance are Standard Components of the solution.

Simplified acceptance from internal IT and external 3rd Party Service Providers

Comprehensive security at the hardware, software, and network layers

Unlimited access to network types, carriers, or technology on a single invoice

Feature rich without elevated costs

Enables VPN access for secure remote access to remote assets
